More Information

about me

in 2014 I've started as a desktop developer using C# and VB.net
and around the mid off 2015 started learning web development with PHP then I learned Laravel and started to get deeper in web + backend development
after grasping good knowledge in web and backend development I started to expand my knowledge base and I discovered what is called a T-shaped developer which is all about keeping diving deeper into one area while focusing on learning new things in different areas and at that point, I started to learn more topics like UI/UX, mobile development, agile, security and front end, etc
and to this day I keep learning new technologies and topics that interest me and give me broader look as a developer

My T-shape Model
